 **Nidaş**

VISION To be in a leading position with our strong corporate culture by following the value oriented sustainable quality principle.

MISSION To become an organization that processes calcite in the national and international arena, with the highest quality, meeting customers' expectations and with environmental awareness.

OUR VALUES

- As Nidas A.S., maintain our activities in line with the ethical rules.
- Achieve customer satisfaction and meet customer requirements at the highest level.
- Act in accordance with the principles of responsibility, transparency and honesty.
- Focus on the continuous improvement.

CALCITE / CaCO_3

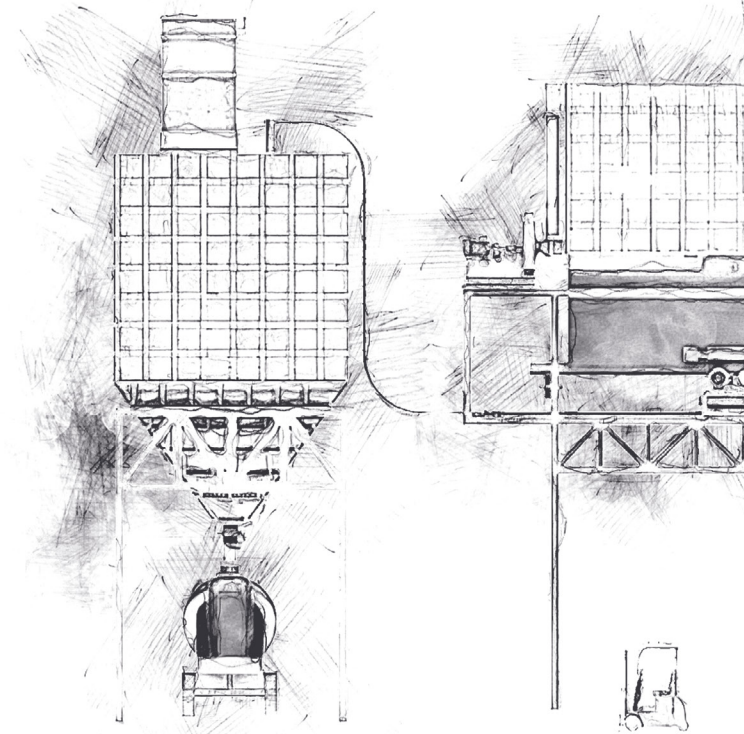

It is an easily grindable industrial mineral with high purity and whiteness.

CHEMICAL PROPERTIES

CaCO_3	%99,3
CaO	%55,6
CO_2	%43,5
Fe_2O_3	%0,02
Al_2O_3	%0,02
MgO	%0,5
SiO_2	%0,02

PHYSICAL PROPERTIES

Density	2,75 g/cm ³
Hardness	3 Mohs

 PREMIUM

NIDASCARB **PRO** COATED CALCITE

The products processed by double coating under special conditions by adding internal and external slider STEARATES and DEHUMIDIFIERS in accordance with the recipe developed in our R&D laboratory are named PRO COATED CALCITE.

Ca²⁺ & Zn & Ti+...= PRO CALCITE

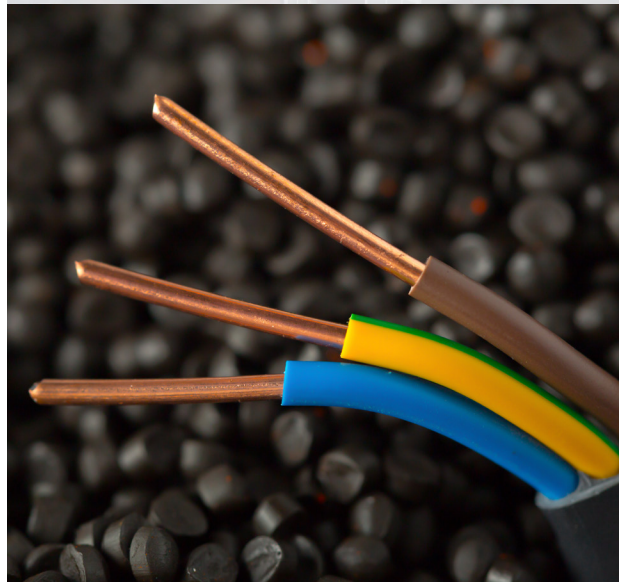

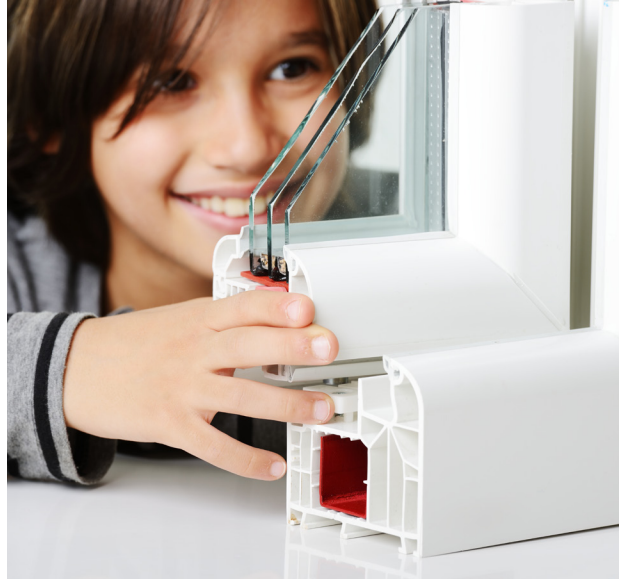

- ✓ Easy dispersion
- ✓ High homogenization
- ✓ Compatibility with organic environments
- ✓ Bright and smooth surface
- ✓ Increased productivity
- ✓ Less mold wear
- ✓ Strength increase
- ✓ Low surface energy
- ✓ Hydrophobic structure

Plastic

Calcite is a significant filling material in the production of plastic from materials such as polyethylene (PE), polyvinyl chloride (PVC) and polypropylene (PP). Its use is increasing day by day due to its durability, hardness, prevention of internal strain ability and resistance against high temperatures.

The main areas of use in plastic production:

- MASTER BATCH
- PVC PROFILES
- CABLE
- PIPES
- RUBBER
- ARTIFICIAL LEATHER
- SHOES SOLE

Paint

Calcite is the most important filling material used in paint production.

- Ensures superior hiding power and opacity thanks to its high whiteness and purity
- Ensures paint adhesion with its reinforcing feature
- Increases the impact resistance of the paint film
- Decreases TiO_2 consumption
- Controls the viscosity
- Has a low oil absorption rate
- Increases the brightness of the paint.

Paper

Calcite is used in paper production as filling and coating pigment. Calcite is an indispensable auxiliary product in paper production due to its high whiteness, water insoluble feature and low abrasiveness.

- Delays the yellowing of paper
- Reduces the use of such products as kaolin, optical whiteners and cellulose
- Ensures high dispersion
- Improves print quality due to its oil absorption feature.

Construction Chemicals

Calcite is an important filling material for joint grout, mineral plaster mortar, tile adhesives, jamps and similar products.

- Adds high whiteness
- Provides a decorative appearance to mineral plaster mortar
- Increases the power of adhesion

NATURAL WHITENESS CHANGING THE WORLD.

TÜRKİYE / NİĞDE

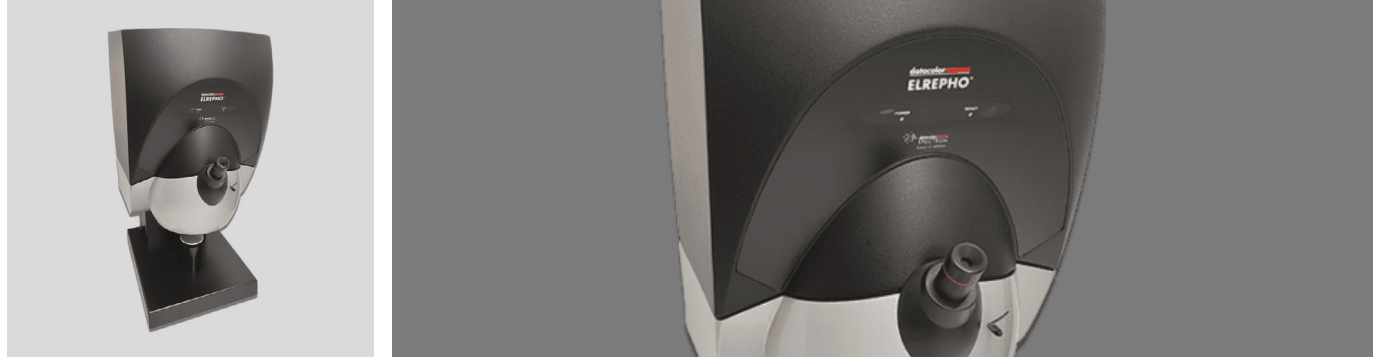

ADDS VALUE TO NATURE.

We protect our environment with the inspiration
we get from the nature.
